

Conclusion of user test Picoo

The user test revealed that the website is intuitive and easy to navigate. The tester expressed appreciation for the overall design, layout, and the concept behind the quiz creation tool. They found the process of creating and editing quizzes straightforward and visually appealing.

However, while no major usability issues were reported directly, we observed a few areas where the user experienced minor confusion. Specifically, there was a slight struggle identifying how to mark answers as correct — the checkbox feature for selecting correct answers was not immediately clear. Additionally, the button to create a new quiz could be made more prominent, as it took the user a moment to locate and understand its function. Improving the visibility and clarity of key actions such as marking correct answers and starting a new quiz will help enhance the overall user experience and accessibility of the tool.
